

Karim Z. Alibhai D.M.D.
Diplomate, American Board of Endodontics

POST TREATMENT INSTRUCTIONS

1. The tooth and the adjacent supporting tissues may be tender for a few days after treatment. This mild discomfort will be relieved by Advil, Aleve or Tylenol.
2. Occasionally moderate to severe discomfort may occur. If medication has been prescribed, use it according to the directions. If you do not have a prescription for pain medication, please call the office.
3. Some swelling is possible. Call the office if more than a slight puffiness occurs.
4. If any other problems develop, please notify the office as soon as possible.
5. In order to protect the tooth against fracture during or immediately after treatment, avoid chewing on the tooth until the final restoration has been placed by your general dentist.
